Or have a look at the [Long Term Support \(LTS\) schedule](#).

```
npm install -g npm
```

```
npx create-react-app my-app
```

```
cd my-app
```

```
npm start
```

Success! Created market-value at D:\MarketValue\market-value  
Inside that directory, you can run several commands:

`npm start`

Starts the development server.

`npm run build`

Bundles the app into static files for production.

`npm test`

Starts the test runner.

`npm run eject`

Removes this tool and copies build dependencies, configuration files  
and scripts into the app directory. If you do this, you can't go back!

We suggest that you begin by typing:

`cd market-value`

`npm start`

Happy hacking!
